

# ADA Panels & Pavers

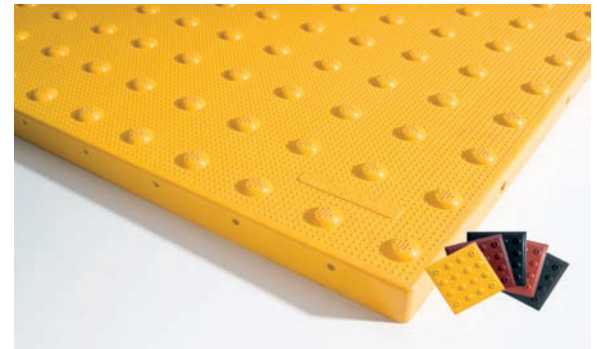

## PRESTRESSED ADA PANELS

ARCIS combines a high strength and abrasion resistance at a premium level to the detectable warning panel markets. The premium cast stone mix is prestressed with high strength stainless steel reinforcement which creates the most durable and dependable product available on the market.

## COMPOSITE TACTILE WARNING PANELS

Quick and easy installation into freshly poured concrete. Color is UV stable and is integral (not a coating). Slip resistant, chemical resistant, and long wearing. Surface mount panels available upon request.

## ADA PAVERS

The preferred paving alternative to typical ADA compliant surfacing, Pavestone's ADA Paver features truncated domes. The domes are designed to alert pedestrians and in some applications, motorists of potentially dangerous situations.

The Pavestone ADA pavers are approved for municipal use and comply with the 2004 ADA Compliance - (July 23, 2004: Access Board Issues New Guidelines for Accessible Design)

These interlocking concrete pavers are perfect for transportation centers, street intersections, hazardous vehicle areas and pedestrian ramps.
